DETECTIVE FOLLOW-UP REPORT
Case #2023-21041

NARRATIVE

03/28/23

I was assigned this case for review and follow up.

On 03/25/23 Officer Donahue responded to the report of a deceased person found underneath pier 66. See Officer Donahue's report for reporting party and recovery information.

The remains were badly decomposed and likely had been in the water for an extended period of time. The remains were that of a male and was wearing blue brief type underwear with tan and red socks.

04/19/23

After the King County Medical examiner's office conducted a series of tests the following information was determined about the remains.

Male

Height: 5'4"

Weight: 135lbs (likely slightly heavier at the time of death)

Race: Most likely Caucasian but could be Asian or Hispanic

Age: Mid 50's to 83, most likely 60-70 years old

Medical history: significant arthritis in his back and a previously broken nose

It was also determined the deceased had been in the water some time between two week and six months, most likely being around two months.

The manner of death is undetermined and there is no anatomic cause of death in decomposed and partially skeletonized remains.

I sent a notification to local law enforcement databases in an effort to locate an agency that may be looking for the deceased.

04/19/23

I created an account with the National Missing and Unidentified Persons System (NamUs). The King County Medical Examiner's Office created a profile for this case. I am listed as the law enforcement contact.

NamUs will automatically compare potential matches and notify me of the results.

DETECTIVE FOLLOW-UP REPORT
Case #2020-

04/20/23

I received an email from Kent Police Detective Lorette. He is investigating a missing person that closely matches the deceased. Furthermore, the missing person was last seen near the Green River which ultimately leads into Elliott Bay where the body was located.

04/25/23

I was notified dental records from the Kent PD missing person was not a match.

I attached the King County anthropology report to this case file.

The Washington State Attorney General's Homicide Investigation Tracking System (HITS) published a bulletin for this case.

06/21/23

A DNA request was submitted by NamUs.

08/02/23

A Marysville Police Department missing person was excluded via dental record comparison.

09/25/23

There are currently no further investigative leads for this case. I recommend it be placed in an inactive status pending further information.

I certify under penalty of perjury, under the Laws of the State of Washington, the above statement is true and correct.
